

Bio Skin Glow FAQs

01 | What is the difference between Milky Essence and Milky Essence Mist?

Both have the same formula in two dispensing options to meet use preferences. Use Milky Essence if you prefer to pat-on this 3rd generation toner. Use Milky Essence Mist if you prefer to spritz on this formula in a size that you can easily carry with you.

02 | Can I use the Ampoule on its own?

The Ampoule Serums can be used on their own, however, layering the products in the Bio Skin Glow series amplifies the outcome. Together, the products create a greater impact on the skin than when used alone. If you're short on time, you can quickly add 2- 3 drops of your preferred Ampoule Serum into Bio Skin Glow Advanced Radiance Cream and get the benefits of both products together.

03 | Why is hyaluronic acid good for my skin?

With the ability to draw and hold water, hyaluronic acid (HA) effectively brings moisture to the surface of the skin, continually keeping the skin hydrated and plump. Our Hyaluronic Acid Ampule Serum is a *Powerhouse* for the ultimate deep hydration.

04 | Why is Vitamin C good for my skin?

This incredible antioxidant is known to improve skin tone and texture and reduce signs of aging. Our Vitamin C Ampule Serum is the *Radiance Master*. It mixes perfectly with each Ampoule Serum. We recommend using it in the morning for a radiant look all day, and at night to preserve this radiance and to help the skin become more resilient.

05 | Can I use MA Night Ampoule Serum on its own?

Yes. But the effects of the MA Night Ampoule Serum are amplified when it's used together with other products in the Bio Skin Glow line.

06 | How often should I use Advanced Radiance Cream?

We recommend applying it every day, mornings and evenings, as the last step of your Bio Skin Glow skincare routine.
